(54) MEMBER FOR PRINTING EQUIPMENT, SURFACE TREATING METHOD THEREFOR, AND PRINTING EQUIPMENT USING THE MEMBER

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a member for printing equipment and the printing equipment using the member, which make electrification hardly occur in a film and the member brought into contact with the film, even if high-speed printing is done, which prevent ink from being transferred to a roll by the contact of a printed part of the film with the roll, which make the quality of printed matter good, which bring about a safe operating environment for the printing, and which include an ink pan with good workability of ink cleaning, ink wiping, etc., in terms of the printing equipment for the rolled film, typified by gravure printing equipment.

SOLUTION: The member 1 for the printing equipment comprises a conductive metal which is mainly composed of iron, stainless steel, aluminum and CFRP; a metallic compound such as a tungsten compound, a molybdenum compound and a chromium compound, an alloy, containing the metallic compound, or a cermet is thermally sprayed onto a surface 4 of the member 1; the surface, which undergoes thermal spraying, is coated with a fluorocarbon resin or a silicone resin 3; and thermally sprayed metals 2 are partially exposed on the surface coated with the resin 3.
